### **DETAILED ACTION**

The preliminary amendment filed 6/30/2005 has been entered.

The numbering of claims presented with the new claims of 11/26/2007 is not in accordance with 37 CFR 1.126 which requires the original numbering of the claims to be preserved throughout the prosecution. When claims are canceled, the remaining claims must not be renumbered. When new claims are presented, they must be numbered consecutively beginning with the number next following the highest numbered claims previously presented (whether entered or not).

Misnumbered claims 3-10 been renumbered 4-11.

An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it **MUST** be submitted no later than the payment of the issue fee.

Authorization for this examiner's amendment was given in a telephone interview with Peter Holsen on 1/30/2008.

The application has been amended as follows:

In the claims

3. (Canceled)

4. (Previously Presented): A pulling tool for use in pipelines and boreholes, the pulling tool comprising:

a body that is elongated along a central longitudinal axis;  
a terminal element that is displaceable in a direction that is parallel to the central longitudinal axis;

at least one link arrangement being displaceable in a radial direction with respect to the central longitudinal axis, the link arrangement comprising first, second and third elongated links, the second link hingedly connecting one end of the first link to the elongated body and the third link hingedly connecting the other end of the first link to the terminal element;

a hinge pin connecting the third link to the terminal element, the hinge pin located on the opposite side of the central longitudinal axis relative to the first link;

wherein displacement of the terminal element in the direction parallel to the central longitudinal axis causes displacement of the link arrangement in the radial direction with respect to the central longitudinal axis.

5. (Currently Amended): The pulling tool of claim 34, having exactly three link arrangements offset relative to each other around the body at 120 degree intervals.

6. (Currently Amended): The pulling tool of claim 34, comprising a preloaded spring element connected to the terminal element and operable to bias the first link radially outwardly.

7. (Currently Amended): The pulling tool of claim 56, comprising an actuator driving the spring element.

8. (Currently Amended): The pulling tool of claim 34, comprising a propulsion chain riding along at least the first link.

9. (Currently Amended): The pulling tool of claim ~~6~~7, comprising an electric motor enabling mechanical drive of the propulsion chain.

10. (Currently Amended): The pulling tool of claim ~~7~~8, wherein a supply of energy to the electric motor is provided by a cable connection.

11. (Currently Amended): The pulling tool of claim ~~8~~9, wherein the mechanical drive of the chain is enabled by at least one chain wheel.

### ***Conclusion***

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. Gurrero et al. (US 6,910,533) discloses a pulling tool with first, second and third links, but do not disclose a hinge pin connecting the third link to a terminal element located on the opposite side of the central longitudinal axis relative to the first link.
